Alert Detail

redni	Absence of Anti-CSRF Tokens
	No Anti-CSRF tokens were found in a HTML submission form. Cross-site request forgery jest atakiem, który obejmuje zmuszanie ofiary do wysania dania HTTP do miejsca celowego bez ich wiedzy lub intencji w celu przeprowadzenia akcji jako ofiara. Podstawow przyczyn jest powtarzalno dziaania aplikacji z przewidywalnymi adresami URL / formularzami. Charakterem ataku jest to, e CSRF wykorzystuje zaufanie, jakie witryna darzy uzytkownika. Natomiast skrypty cross-site scripting (XSS) wykorzystuj zaufanie, jakim uzytkownik darzy stron internetow. Podobnie jak w przypadku XSS, ataki CSRF niekoniecznie musz by przekierowane na drug stron, ale mog by. Cross-site request forgery jest równie znane jako CSRF, XSFR, atak za jednym klikniem, jazda na sesjach, zdezorientowany delegat i surfowanie po morzu.
Opis	Ataki CSRF s skuteczne w wielu sytuacjach, w tym: <ul style="list-style-type: none"> * Ofiara ma aktywn sesj w witrynie docelowej. * Ofiara jest uwierzytelniona za poednictwem protokolu HTTP w witrynie docelowej. * Ofiara jest w tej samej sieci lokalnej co strona docelowa. <p>CSRF zosta uzyty przede wszystkim do wykonania akcji przeciwko witrynie docelowej z wykorzystaniem przywilejów ofiary, ale odkryto najnowsze techniki udostpniania informacji poprzez uzyskanie dostpu do odpowiedzi. Ryzyko udostpnienia informacji dramatycznie wzrasta kiedy strona celu jest podatna na XSS, poniewa XSS moe by uzyty jako platforma dla CSRF, wczajc w to atak obsugiwany w granicach polityki tego samego pochodzenia.</p>

redni	CSP: Wildcard Directive
Opis	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website

	owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

redni	CSP: script-src unsafe-eval
Opis	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

redni	CSP: script-src unsafe-inline
Opis	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Opis	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

redni	Content Security Policy (CSP) Header Not Set
Opis	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Niski	CSP: Notices
Opis	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Niski	Strict-Transport-Security Header Not Set
Opis	HTTP Strict Transport Security (HSTS) is a web security policy mechanism whereby a web server declares that complying user agents (such as a web browser) are to interact with it using only secure HTTPS connections (i.e. HTTP layered over TLS/SSL). HSTS is an IETF standards track protocol and is specified in RFC 6797.

Niski	X-Content-Type-Options Header Missing
Opis	The Anti-MIME-Sniffing header X-Content-Type-Options was not set to 'nosniff'. This allows older versions of Internet Explorer and Chrome to perform MIME-sniffing on the response body, potentially causing the response body to be interpreted and displayed as a content type other than the declared content type. Current (early 2014) and legacy versions of Firefox will use the declared content type (if one is set), rather than performing MIME-sniffing.

Evidence	
Instances	1
Solution	Ensure that the application/web server sets the Content-Type header appropriately, and that it sets the X-Content-Type-Options header to 'nosniff' for all web pages. If possible, ensure that the end user uses a standards-compliant and modern web browser that does not perform MIME-sniffing at all, or that can be directed by the web application /web server to not perform MIME-sniffing.

Informacyjny	Cookie Poisoning
Opis	This check looks at user-supplied input in query string parameters and POST data to identify where cookie parameters might be controlled. This is called a cookie poisoning attack, and becomes exploitable when an attacker can manipulate the cookie in various ways. In some cases this will not be exploitable, however, allowing URL parameters to set cookie values is generally considered a bug.

Instances	1
Solution	Do not allow user input to control cookie names and values. If some query string parameters must be set in cookie values, be sure to filter out semicolon's that can serve as name/value pair delimiters.

Informacyjny	Loosely Scoped Cookie
Opis	Cookies can be scoped by domain or path. This check is only concerned with domain scope. The domain scope applied to a cookie determines which domains can access it. For example, a cookie can be scoped strictly to a subdomain e.g. www.nottrusted.com, or loosely scoped to a parent domain e.g. nottrusted.com. In the latter case, any subdomain of nottrusted.com can access the cookie. Loosely scoped cookies are common in mega-applications like google.com and live.com. Cookies set from a subdomain like app.foo.bar are transmitted only to that domain by the browser. However, cookies scoped to a parent-level domain may be transmitted to the parent, or any subdomain of the parent.

Solution	For secure content, ensure the cache-control HTTP header is set with "no-cache, no-store, must-revalidate". If an asset should be cached consider setting the directives "public, max-age, immutable".

Informacyjny	User Controllable HTML Element Attribute (Potential XSS)

Opis	This check looks at user-supplied input in query string parameters and POST data to identify where certain HTML attribute values might be controlled. This provides hot-spot detection for XSS (cross-site scripting) that will require further review by a security analyst to determine exploitability.
